EDUCATION

University of North Carolina at Chapel Hill

Bachelor of Science in Computer Science and Statistics

Chapel Hill, NC

Aug. 2025 – Expected May. 2029

Nanjing University

Undergraduate Studies

Nanjing, China

Aug. 2024 – May. 2025

EXPERIENCE

Business Intelligence and Data Analytics Intern

May 2026 – Aug. 2026

UNC Athletics Department

Chapel Hill, NC

- Processed and integrated NCAA athletics financial datasets spanning 2019–2024, combining with Directors' Cup standings datasets across FBS institutions.
- Cleaned and standardized institution-level data by resolving inconsistencies and creating custom fields in Tableau to support cross-dataset joins and analysis.
- Built Tableau visualizations including financial trend, correlation, and various plots to identify performance patterns, and presented data-driven insights to athletic department stakeholders.

Break Through Tech AI Program

May 2026 – Aug. 2026

Cornell University

New York, NY

- Engineered a NLP pipeline to classify sentiment across 1973 text reviews, training a Word2Vec model to extract word embeddings for a Logistic Regression classifier.
- Built a RAG system using LangChain and OpenAI's API to accurately answer domain-specific questions based on a provided knowledge base.
- Experienced in designing multi-agent AI systems using LangGraph, OpenAI Agents SDK. Implemented workflows incorporating key agentic design patterns—such as parallelization, evaluator-optimizer loops, and custom MCP servers—to automate complex tasks like document analysis and report generation.

Case Challenge Contestant

Sep. 2025

Carolina Financial Well-Being Center

Chapel Hill, NC

- Awarded 1st Place among competing teams for developing data-driven marketing and audience engagement strategies.
- Analyzed metrics across Instagram posts in Python using Pandas and Matplotlib to execute data cleaning, categorical classification, and exploratory analysis.
- Delivered actionable content optimization recommendations to center leadership to boost social media reach and student participation.

PROJECTS

Automated Lecture Note and Transcript App | Python, OpenAI API (Whisper, GPT-4o), FFmpeg July 2026

- Developed an automated pipeline to split large audio files into manageable segments using FFmpeg.
- Integrated OpenAI's Whisper API to accurately transcribe audio files into text.
- Engineered custom system prompts to transform raw transcripts into structured, comprehensive academic notes formatted in Markdown and HTML.

Handwritten Digit Classifier | Python, TensorFlow, Keras, NumPy, Seaborn

August 2026

- Built and trained a Convolutional Neural Network using Keras and TensorFlow to classify handwritten digits.
- Constructed a neural network architecture featuring four convolutional layers, batch normalization, ReLU activation, and global average pooling.
- Preprocessed and normalized image data by scaling grayscale pixel values and reshaping arrays to meet input requirements.
- Optimized model training utilizing a sparse categorical crossentropy loss function and stochastic gradient descent.

TECHNICAL SKILLS

Languages: Python, R, Java, SQL (Postgres), HTML/CSS

Developer Tools: Git, Github, Docker, Google Cloud Platform, Visual Studio Code, R studio, Tableau, IntelliJ, Jupyter Notebook, OpenAI API

Libraries: Pandas, NumPy, Matplotlib, Scipy, Tidyverse, Scikit-Learn, TensorFlow, Seaborn, Gensim, FFmpeg
